## I. Introduction

The purpose of this study is to examine how the United States Census Bureau should enumerate prisoners. Since 1790 the Census Bureau has applied the "usual residence" rule to prisoners. This method counts prisoners in the institution where they are incarcerated. Currently, the Census Bureau is conducting a post-Census 2000 evaluation to assess its data and plan for the next enumeration in 2010. ${ }^{1}$ This paper will help determine whether counting prisoners in their place of incarceration is appropriate in the future.

Where prisoners are enumerated is important. To comport with the constitutional restrictions on redistricting as well as to ensure the accuracy of demographic studies based on Census statistics, prisoners must be counted in the appropriate location. Previous research on this question assumes that the "usual residence" rule as applied to prisoner enumeration results in the movement of prisoners from minority, urban areas to white, rural ones. This assumption does not have nation-wide application, however.

No southern states have yet been analyzed to assess the impact of the "usual residence" rule on prisoner movement. Nevertheless, the South now has a higher incarceration rate than any other region in the United States. ${ }^{2}$ Thus, any course of action by the Census Bureau is ill-

[^0]advised unless it accounts for variation in southern states regarding the impact of prisoner enumeration on racial and geographic dispersion.

This research, therefore, provides in-depth statistical studies of two southern states-Georgia and North Carolina. One major finding is that neither Georgia nor North Carolina comport with the assumed pattern of urban to rural shifts correlating to a movement of prisoners from black to white areas of a state. In Georgia, incarcerated prisoners are concentrated in a small number of counties, and the counties of origin are not the same as the counties of incarceration. In contrast, in North Carolina, both the counties of residence and incarceration are dispersed throughout the state; the same counties both originate and incarcerate prisoners. Both states, however, exhibit a transfer of prisoners from metropolitan to nonmetropolitan areas. But, neither reflects a cross race transfer. Although the majority of prisoners in Georgia and North Carolina are African-American, these prisoners do not necessarily move from majority African-American to majority white areas. In other words, in the South, urban does not mean black: in fact, many rural areas have significant African-American populations.

Based upon these findings, the recommended method for counting prisoners is to compile two independent data sets: one indicating current incarceration address and another compiling the home county prior to incarceration. ${ }^{3}$ The bifurcation of data will provide increased accuracy and flexibility in state-based decisions informed by Census statistics.

The study is organized into six sections. After this introduction in Part 1, part II examines the "usual residence" rule and explains its possible impact on redistricting and the Equal Protection Clause, the allocation of government funding, and the credibility of Census
data. The third part surveys previous state-specific research on the relationship between racial and geographic movements of prisoners due to enumeration under the "usual residence" rule. Part IV provides an explanation of the methodology and terminology employed throughout the paper. The heart of the study in part V consists of detailed statistical analysis of the two case studies in Georgia and North Carolina. The last section offers a brief recommendation to bifurcate the data sets to allow for state-based variation. Finally, the appendices compile the data and are organized by state.

## II. The "Usual Residence Rule"

## A. The Definition and Origin of the "Usual Residence" Rule.

The Census Bureau is charged with counting every person in the country; it recognizes that equally important is actually counting every person in the correct location. Accuracy is particularly important because the fundamental purpose of the census is to fulfill the constitutional requirement in Article 1, Section 2 to apportion the seats in the U.S. House of Representatives among the states. ${ }^{4}$

Since 1790 the governing principle for determining where to count people for Census purposes has been the "usual residence" rule; while this standard means "the place where the person lives and sleeps most of the time," it is not necessarily the same as the voting or legal residence. ${ }^{5}$ The "usual residence" rule has been the standard to enumerate people, including prisoners, since the first Census in $1790 .{ }^{6}$ The Census Bureau defines "usual residence" as "the living quarters where a person spends more nights during a year than any other place.." ${ }^{, 7}$ In

[^1]addition, anyone without a "usual residence" is counted where they slept on Census Day, April 1. Thus, inmates of correctional institutions, including prisons, jails, detention centers, or halfway houses are counted at the institution where they work, eat, and sleep. ${ }^{8}$

## B. Potential Impact of the "Usual Residence" Rule and Prisoner Enumeration

The "usual residence" rule has potential detrimental effects. The degree of harm, however, is state specific. It depends on geographic differences between where prisoners originate and where they are incarcerated: the greater the difference, the greater the potential detriment. Moreover, the harm is exacerbated if the difference between counties of origin and incarceration creates a population shift along racial (black to white) or geographic (urban to rural) lines.

The following highlights three potential dangers of enumerating prisoners in the incorrect location: violating the Equal Protection Clause through improper redistricting; skewing the allocation of government resources; and damaging the credibility of Census data.

First, the Equal Protection Clause may be violated due to redistricting based on inaccurate data. States are required to redraw state legislative districts every ten years in order to keep districts of equal population size. ${ }^{9}$ Within one year of Census Day, the Census Bureau must provide redistricting data to states. ${ }^{10}$ Further, states have the option to participate in a voluntary Census Bureau program; participation enables them to receive data for voting districts (e.g.

[^2]election precincts, wards, state house, and senate districts) in addition to standard census geographic areas, such as counties, cities, census tracts, and blocks. ${ }^{11}$

Under the one-person, one-vote principle mandated by the Supreme Court in Reynolds $v$. Sims, the Equal Protection Clause demands that "the weight of a citizen's vote cannot be made to depend on where he lives." ${ }^{12}$ However, counting prisoners in the county of incarceration rather than their county of origin can cause the weight of a citizen's vote to depend on where he lives. For example, assume there is a state where the majority of prisoners are from urban, minority areas while the majority of prisons are located in rural, white ones. ${ }^{13}$ In this case, shifting prisoners through "usual residence" enumeration has an unconstitutional effect: communities with correctional institutions include the enumerated prisoners in reaching their ideal district size. However, the communities of origin must add additional people to their districts to meet the ideal district size. The result is that the votes are diluted in the communities of origin but inflated in the communities of incarceration.

Moreover, the unconstitutional effect is exacerbated by the inability of prisoners to vote. ${ }^{14}$ All but two states have prisoner disenfranchisement laws. Thus, prisoners cannot vote in the communities where incarcerated, even though they are included in reaching the ideal district size. Thus, the vote of each person in a county with a prison counts more than a vote from a county where the prisoner originated.

Significantly, if there is a shift of black prisoners to white areas and these black prisoners are enumerated in their place of incarceration, there may be potential complications related to

[^3]racial gerrymandering and the creation of majority-minority districts under the Voting Rights Act.

Second, analysts disagree about the extent to which prisoner enumeration effects the allocation of government funding. One study found that:

> "According to the U.S. General Accounting Office (2003), the federal government distributes over $\$ 140$ billion in grant money to state and local governments through formula-based grants. Formula grant money is in part based on census data and covers programs such as Medicaid, Foster Care, Adoption Assistance, and Social Services Block Grant. Within a state, funding for community health services, road construction and repair, public housing, local law enforcement, and public libraries are all driven by population counts from the census."

Assuming these findings are correct, then a significant difference between counties of origin and counties of incarceration can cause a considerable shift of resources away from the home community of the prisoners to the prison community. ${ }^{16}$ Other experts argue that the Urban Institute's assessment is exaggerated and possibly incorrect, and thus fails to confirm an impact on the allocation of government funding. ${ }^{17}$

Finally, Peter Wagner asserts that the way in which prisoners are counted can have a significant impact on the credibility of the Census data in a wide range of demographic categories. If black prisoners are moved to white areas or if urban residents are shifted to rural areas, then the Census data: (a) inappropriately influences gender studies (because the prison population inflates the percentage of males in county's population); (b) misrepresents the actual growth or decline in the number of residents in a county (because counties with prisons will be inflated by the prisoner population, in some cases, even if there has been a decline in the birth rate or number of non-prisoners moving there); (c) misrepresents the actual growth or decline in the number of minorities in a county (because African-Americans represent the majority of

[^4]prisoners, wherever they are counted with have an increased minority population); and (d) skews income statistics because prisoners are counted in per-capita income statistics. ${ }^{18}$

## III. Previous Research on the "Usual Residence" Rule and Prisoners

## A. The Argument that Prison Enumeration Should be Changed.

The Prison Policy Initiative, spearheaded by Peter Wagner and funded by the Open
Society Institute, has prompted debate about the appropriate enumeration of prisoners in Census
2010. ${ }^{19}$ Based on in-depth analyses of New York and Ohio, and a survey of cities in eight other states, Wagner concludes that the "usual residence" rule as applied to prisoners should be abandoned. ${ }^{20}$ This recommendation is based on an assumption that the geographic impact resulting in racial shifts observed in states such as New York amount to a nation-wide pattern;
thus, this pattern implicates the "usual residence" rule as constitutionally suspect when applied to prisoners. Several other analysts have issued policy papers supporting the abandonment of the "usual residence" rule as applied to prisoners based, at least partially, on Wagner's assumptions. ${ }^{21}$

Wagner hangs his constitutional theory on a factual and normative argument. Factually, he argues that prisoners are not part of the local community, as apparently evidenced by the fact

[^5]that "after release, the incarcerating community no doubt wishes that ex-prisoners leave on the first bus out of town." 22 In prison communities, Wagner concludes that there is an "out of sight, out of mind" approach to prisoners, which may account for why the Census Bureau mistakenly allocated prisoners to towns where there were no prisons. ${ }^{23}$ Normatively, Wagner argues that the preservation of "communities of interest" ought to have constitutional value; the home community prior to incarceration is considered the "community of interest" and, thus, prisoners should be counted in their urban, minority, and Democratic area for representative purposes. ${ }^{24}$

## B. Survey of State-Specific Research

Although Wagner's research into the geographic and racial effect of prisoner enumeration is ongoing, based on the following states, he concludes that a clear pattern has emerged warranting the elimination of the "usual residence" rule as applied to prisoners. ${ }^{25}$ This section simply compiles Wagner's research.

## 1. New York and Ohio

New York provides the foundation for Wagner's theory. Both New York and Ohio have been comprehensively examined by Wagner.

In New York, the "usual residence" rule shifts urban, black men from Democratic districts to rural, white, Republican ones. "In New York...only 24\% of prisoners are from upstate, but $91 \%$ of prisoners are incarcerated there. ${ }^{, 26}$ New York City alone had 44,326 city residents counted in upstate prisons, but gained only 486 prisoners from other parts of the state

[^6]due to the Census Bureau's method of enumeration. ${ }^{27}$ If the prisoners were apportioned more appropriately, according to Wagner, with their "community of interest" in the urban areas, then these urban districts would impermissibly exceed the equal population deviation permitted.

Wagner's research revealed that "[a]fter removing prisoners from the proposed senate districts [in New York's redistricting plan], 7 [rural] districts are short more than $5 \%$ of the required average of 306,072 " ${ }^{28}$ while the "most over-populated Senate districts are located in Queens." Further, seven upstate senate districts are short more than $5 \%$ of their required size to comport with one-person, one-vote, and "all 7 of these districts belong to rural Republicans." ${ }^{29}$

In Ohio, while African-Americans are $12 \%$ of the population, they account for $50 \%$ of the incarcerated population. ${ }^{30}$ Because African-Americans are concentrated in urban areas, all of Ohio's major cities (Akron, Cleveland, Cincinnati, Columbus, Dayton, and Toledo) see a reduction in their Census population from how prisoners are counted.

## 2. Examination of Large Cities in Eight Other States.

Wagner bases his findings in Texas, South Dakota, Pennsylvania, Maryland, California, Michigan, New Jersey and Arizona on an analysis of the largest cities in a state as opposed to a more comprehensive examination of the entire state. ${ }^{31}$ Thus, it is unclear if a state-wide pattern can be assumed from this city-specific analysis.

[^7]First, ten counties in Texas ${ }^{32}$ incarcerate at least $21 \%$ of their population. In addition, ten counties in Texas appeared to grow according to Census 2000 figures when they actually shrank. Communities that are urban and black lose people; for example, Harris and Dallas Counties suffered significant net losses based on how prisoners were counted- 25,000 and 20,000 people, respectively. These shifts have significant impacts on equal population redistricting; for example, $12 \%$ of one House District consisted of incarcerated persons.

Wagner finds similar disparities in South Dakota. ${ }^{33}$ The difference between county of origin and incarceration is exemplified by Pennington County, which constitutes $12 \%$ of South Dakota's population but supplies $24 \%$ of the state's prisoners. The felony disenfranchisement of prisoners, which Wagner argues inflates the political power of districts where prisoners are incarcerated at the expense of their home communities, is particularly significant due to the fact that Native Americans are incarcerated at four times the rates of white people in South Dakota. Wagner's analysis of South Dakota legislative districts indicates that three districts are at least $3 \%$ incarcerated prisoners. In one district, more than $6 \%$ of the Census population is behind bars.

Third, Wagner identifies Pennsylvania as following the geographical shift of prisoners from urban to rural communities based on an analysis of Philadelphia. Although $12 \%$ of the state's population resides in Philadelphia, $40 \%$ of the state's prisons are from there. Yet, no state prisoners are incarcerated in Philadelphia. ${ }^{34}$

[^8]Similarly, in Maryland, although most prisons are located in rural areas, the majority of prisoners originated from urban areas such as Baltimore City. Baltimore has an incarceration rate reaching 2,420 per 100,000 residents. ${ }^{35}$

A California county also conforms to a pattern shifting prisoners from urban to rural areas. Although Los Angeles County constitutes twenty-eight percent of the population of the state of California, it supplies $34 \%$ of the state's prisoners and yet incarcerates only three percent of the state's prisoners. ${ }^{36}$

Sixth, thirty percent of Michigan's prison population originates in Wayne County (containing Detroit); there is also a large correctional facility in Wayne County (containing 14,000 prisoners). Yet, 9,974 Wayne County residents were lost in the 2000 Census because they were counted as residents of other counties. For example, Chippewa, Iona and Jackson Counties gained more than 4,000 residents from this shifting. ${ }^{37}$

Seventh, Arizona incarcerates 45,783 prisoners; the prison population doubled between 1990 and 2000. Even though the Arizona Constitution defines residence to preclude a changed residence due to incarceration, "at least 71\% of Maricopa County's state prisoners are incarcerated and represented outside the county., ${ }^{, 38}$

Finally, Wagner finds that Essex County (including Newark) is the origin for $18 \%$ of the state's prison population and accounts for $9 \%$ of the state population, yet provides only $11 \%$ of the state's prison cells. The prisoners from Essex County are shifted to rural areas such as

[^9]Cumberland County. The shift lowers the per capital income in Cumberland County and frustrates the ability of the state to allocate resources appropriately. ${ }^{39}$

## IV. METHODOLOGY

The terminology and methodology used in this study are often confusing. Thus, prior to an in-depth examination of Georgia and North Carolina it is appropriate to provide definitions and explanations.

First, there are two primary sources for this research. One is the Census Bureau: Census 2000 provides the data for all general state and county statistics, including the total population as well as the percentages of African-Americans broken down according to county. The second primary source is the department of corrections (DOC) in each state: the DOCs in Georgia and North Carolina provide statistics on the origin of the prisoners prior to incarceration.

Second, the terminology used to distinguish where prisoners come from and where prisons are located (and thus where prisoners are enumerated) is confusing for two reasons: (1) terms are not necessarily used in an intuitive way; and (2) Georgia and North Carolina capture the county where prisoners originate using different terminology.

As used in this analysis, the term "county of origin" denotes the residence of the offender population before imprisonment. It is used synonymously with "home county" in Georgia and "county of residence" in North Carolina. Georgia defines "home county" as the self-reported address of the prisoner prior to incarceration. ${ }^{40}$ "County of residence" is defined by North Carolina as "the county where the offender last resided based on self-report." ${ }^{\text {"41 }}$

[^10]"Incarceration rate" is related to the county of origin. It is an example of a term that is not used in an intuitive way throughout the paper. "Incarceration rate" is the rate at which counties send its citizens to prison. This rate reflects the home county (Georgia) or county of residence (North Carolina) of the offender population.

Nevertheless, "incarcerated population," "incarcerated prisoners," and "county of incarceration" denotes the place where prisoners are imprisoned. The "prisoner enumeration rate" indicates the rate at which a county imprisons the population that was enumerated there in Census 2000; in other words, it captures how many citizens per 100,000 persons are incarcerated within that county.

Third, the metropolitan classification system used by the Census Bureau is employed in this study. It is not an ideal representation of urban versus rural areas, but it suffices for purposes of this research. After each decennial census, the Census Bureau publishes a list of counties classified as metropolitan according to a standard definition determined by the U.S. Office of Management and Budget (OMB). The OMB defines metropolitan area as "a large population nucleus, together with adjacent communities, having a high degree of social and economic integration with that core., ${ }^{42}$ The 1999 definition of metropolitan is the basis for Census 2000 categorization: a county is designated as metro if it has an urban area of at least 50,000 persons or a Census defined urban cluster of at least 10,000 persons. ${ }^{43}$

Fourth, one primary focus of the paper is to identify whether or not there is a cross race transfer between where prisoners originate and where they are imprisoned. Thus, it is vital to

[^11]recognize that the percentage of African-Americans in a given county (or averaged among counties) may be artificially inflated or deflated due to the way in which prisoners are counted by Census 2000. In other words, the data is skewed because African-American prisoners enumerated in a county will increase that county's percentage of African-Americans. Wagner believes that the ideal method of analysis in the future is to calculate the rational distribution of the non-prison population in each county. However, this proved too complex for this study.

Finally, this research raises serious doubt about the accuracy of some Census Bureau figures. The author did significant research on Alabama; however, given the errors in the Census data as well as incompatibility between the Census Bureau figures and the Alabama Department of Corrections data, it is impossible to draw any reasonably reliable conclusions at this time. A complete explanation as well as the data collected in Alabama is indexed in Appendix $3 .{ }^{44}$

## V. Two Southern States: Georgia and North Carolina

Neither Georgia nor North Carolina follow the pattern identified by Wagner in New York, and assumed by other analysts, of urban to rural shifts correlating to a movement of prisoners from black to white areas of the state. In Georgia, incarcerated prisoners are concentrated in a small number of counties, and the counties of origin are not the same as the counties of incarceration. In contrast, in North Carolina, both the counties of residence and incarceration are dispersed throughout the state; the same counties both originate and incarcerate prisoners. Both states, however, exhibit a transfer of prisoners from metro to non-metro areas. But, neither reflects a cross race transfer.

## A. GEORGIA

Georgia does not follow the pattern identified by Wagner in New York of urban to rural shifts correlating to a movement of prisoners from black to white areas of the state. Prisoners’

[^12]counties of origin are not the same as their counties of incarceration. Enumerated prisoners are concentrated in only 25 of Georgia's 159 counties; in fact, 9 counties have a population comprised of at least $10 \%$ prisoners. This concentration corresponds to a shift from metro to non-metro areas. However, metro areas do not necessarily correlate to black areas nor do nonmetro areas necessarily correlate to majority white areas. Thus, there is no cross race transfer of prisoners from black to white areas of Georgia.

## 1. Blacks are Disproportionately Imprisoned and Disenfranchised in Georgia.

Blacks are disproportionately imprisoned and disenfranchised in Georgia. While Georgia's population is mostly white, its prison population is majority black. African-Americans account for $29 \%$ of the 8 million people counted in Georgia in Census 2000. ${ }^{45}$ Yet, they comprise approximately $60 \%$ of the prisoners in the state. See table 1 . In addition, $10 \%$ of African-Americans are disenfranchised (compared to 5\% of the total voting age residents in Georgia). ${ }^{46}$ One out of every eight black men is disenfranchised in Georgia. ${ }^{47}$

The sheer scale of Georgia's prison population is also striking. The Bureau of Justice Statistics indicates that there were 43,626 prisoners in Georgia state facilities as of June 30, 2000; Georgia ranked the ninth highest state for total prison population in the country. ${ }^{48}$ Three

[^13]of Georgia's 158 counties placed in the top fifty for largest local jail jurisdictions across the nation. ${ }^{49}$ Between 1983 and 2001, Georgia tripled its prison and jail population. ${ }^{50}$

## Table 1: Racial Composition of Population compared to Prison Population

|  | Population | \% of <br> Population | Prison <br> Population | \% of <br> Prison <br> Population |
| :--- | ---: | :--- | ---: | :--- |
| White | $5,327,281$ | $65.10 \%$ | 14,448 | $33.44 \%$ |
| Non-White | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 28,755 | $66.56 \%$ |
| Black | $2,349,542$ | $28.70 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Other | 509,630 | $6.23 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |

2. There is a Shift of Prisoners from their Home County to Incarcerated
County in Georgia.

In Georgia, there is a discernable shift of prisoners away from their home county to incarcerated county. Prisoners originate from counties in the south that have concentrations of African-Americans. Prisoners are incarcerated in non-metro counties around the state that have concentrations of African-Americans.

Three processes reveal this shift: first, the study compares the characteristics of the twenty counties that have the highest incarceration rates with the twenty counties that have the lowest incarceration rates. See tables 2 and 3. Second, I examine the twenty-five counties with the largest prison populations (see table 4) as well as counties with at least ten percent of their enumerated population in prison (see table 5). Finally, rates of incarceration are compared to rates of enumerated prisoners.

## a. Prisoners' Home Counties are Located in the South and have Concentrations of African-Americans.

Prisoners' home counties are located in the south and have concentrations of AfricanAmericans.

[^14]The incarceration rate indicates the rate at which citizens from a county are sent to prison. The average incarceration rate in the United States is 481 per 100,000 persons. ${ }^{51}$ In Georgia, the average incarceration rate is 546 per 100,000 persons.

Three significant findings are evident from a comparison of tables 2 and 3. First, counties with low incarceration rates are located in the north while counties with high incarceration rates are in the south and center of the state. Second, prisoners in Georgia originate from counties with heavier concentrations of African-Americans; counties with the highest incarceration rates are $38 \%$ black whereas counties with the lowest incarceration rates are $11 \%$ black. Finally, note that the counties with the highest incarceration rates do not incarcerate a proportional number of prisoners; only $20 \%$ of the state's prisoners are imprisoned in the counties with the highest incarceration rates.

Interestingly, there is a common but incorrect perception, expressed anecdotally by Ron Henry, a statistician with the Georgia Department of Corrections, that the incarceration rates in Georgia are greatest in Atlanta-area counties such as Fulton, DeKalb, and Cobb Counties. In fact, Cobb County has the second lowest incarceration rate (242 per 100,000). Fulton and DeKalb Counties rank $61^{\text {st }}$ and $123^{\text {rd }}$ (out of 159 counties) with rates of 618 and 368 per 100,000 persons, respectively. ${ }^{52}$

[^15]Table 2: Twenty Counties with the Highest Incarceration Rates

| County | Incarceration <br> Rate | \% <br> Black |
| :--- | ---: | :--- |
| Ware | 1122 | $28.0 \%$ |
| Telfair | 1111 | $38.4 \%$ |

| Towns | 172 | $0.1 \%$ |
| Columbia | 180 | $11.2 \%$ |
| Lee | 186 | $15.5 \%$ |
| Paulding | 197 | $7.0 \%$ |
| Union | 202 | $0.6 \%$ |
| Camden | 204 | $20.1 \%$ |
| Catoosa | 218 | $1.3 \%$ |
| Cherokee | 221 | $2.5 \%$ |
| Henry | 225 | $14.7 \%$ |
| Pike | 241 | $14.8 \%$ |
| Cobb | 242 | $18.8 \%$ |
| Habersham | 245 | $4.5 \%$ |
| Average |  | $11.35 \%$ |

b. Prisoners Incarcerated in Georgia are Concentrated in Counties other than Home Counties.

Prisoners incarcerated in Georgia are concentrated in counties other than their home counties. There is a concentration of incarcerated prisoners in 25 of Georgia's 159 counties. In addition, nine counties have a population comprised of at least $10 \%$ prisoners.

There are two effective ways to examine where prisoners are incarcerated and enumerated in Georgia. The first is by examining the twenty-five counties with the largest prison population. The second is by calculating the percent of the county population that is in prison.

Method one indicates there is a high concentration of prisoners in certain counties $(87 \%$ of prisoners are incarcerated in only $16 \%$ of Georgia's counties). This concentration is apparent by looking at the twenty-five counties with the largest prison populations. See table 4 . In addition, twenty-one other counties incarcerate the remaining state prisoners (4,948 prisoners or $13 \%$ of the state total). One-hundred and thirteen out of Georgia's one-hundred and fifty-nine counties do not incarcerate any state prisoners.

Table 4: Top Twenty-Five Counties with the Largest Prison Population

| County | County of <br> Incarceration | Share of <br> Prison <br> Population | $\%$ <br> Black |
| :--- | ---: | :--- | :--- |
| Baldwin | 4,799 | 12.19 | $43.40 \%$ |
| Tattnall | 3,644 | 9.25 | $31.40 \%$ |
| Butts | 1,785 | 4.53 | $28.80 \%$ |
| Mitchell | 1,486 | 3.77 | $47.90 \%$ |
| Chattooga | 1,450 | 3.68 | $11.20 \%$ |
| Hancock | 1,351 | 3.43 | $77.80 \%$ |
| Telfair | 1,319 | 3.35 | $38.40 \%$ |
| Ware | 1,274 | 3.24 | $28.00 \%$ |
| Wilcox | 1,246 | 3.16 | $36.20 \%$ |
| Richmond | 1,219 | 3.10 | $49.80 \%$ |
| Habersham | 1,194 | 3.03 | $4.50 \%$ |
| Chatham | 1,156 | 2.94 | $40.50 \%$ |
| Lowndes | 1,152 | 2.93 | $34.00 \%$ |
| Dooly | 1,129 | 2.87 | $49.50 \%$ |
| Charlton | 1,052 | 2.67 | $29.30 \%$ |
| Washington | 1,044 | 2.65 | $53.20 \%$ |
| Gwinnett | 1,041 | 2.64 | $13.30 \%$ |
| Coffee | 1,018 | 2.59 | $25.90 \%$ |
| Dodge | 1,005 | 2.55 | $29.40 \%$ |
| Wheeler | 999 | 2.54 | $33.20 \%$ |
| Pulaski | 975 | 2.48 | $34.30 \%$ |
| Bibb | 970 | 2.46 | $47.30 \%$ |

| DeKalb | 695 | 1.76 | $54.20 \%$ |
|  | $\mathbf{3 4 , 4 3 3}$ total |  | $\mathbf{3 6 . 6 6 \%}$ |

34,433 total
36.66\% average

Another way to see the concentration of enumerated prisoners is by identifying the counties with a significant percentage of their population in prison. Nine counties in Georgia have at least $10 \%$ of their population in prison. These nine counties are overwhelmingly non-
metro (only one-Dooly County-is classified as metro) and contain significant AfricanAmerican populations (the average number of blacks in these nine counties is $42 \%$ ).

The effect of such large concentrations of enumerated prisoners is often a significant net gain or loss in population. For example, Baldwin and Tattnall Counties both experienced a significant net gain in its population-4,499 and 3,515 persons, respectively. Other counties experienced significant net losses; most notably, Fulton County lost 5,043 persons.

## Table 5: Counties in which 10\% of the Population is in Prison

| County | Census <br> $\mathbf{2 0 0 0}$ <br> Population | County of <br> Incarceration | \% of <br> Population <br> in Prison |
| :--- | ---: | ---: | ---: |
| Tattnall | 22,305 | 3,644 | $16 \%$ |
| Wheeler | 6,179 | 999 | $16 \%$ |

| Baldwin | 44,700 | 4,799 | $11 \%$ |
| Charlton | 10,282 | 1,052 | $10 \%$ |
| Pulaski | 9,588 | 975 | $10 \%$ |
| Dooly | 11,525 | 1,129 | $10 \%$ |

## c. Where are Prisoners Incarcerated and Enumerated Relative to where they Report their Origin Prior to Incarceration?

Prisoners incarcerated in Georgia are concentrated in counties other than their home counties.

The counties with the highest incarceration rates are not necessarily the same counties as have the highest prisoner enumeration rates. Again, incarceration rates reflect the rate at which citizens from a county are sent to prison. Prisoner enumeration rates indicate the rate at which a county imprisons the population that was enumerated there in Census 2000; in other words, it captures how many citizens per 100,000 persons are incarcerated within that county.

To see this shift, compare the counties with the highest incarceration rates with those having the highest prisoner enumeration rate. See table 5 . Note that only six counties with high incarceration rates also have high prisoner enumeration rates. ${ }^{53}$

In addition, the difference in the racial composition of the counties with the highest incarceration rates as compared to highest prisoner enumeration rates is not significant. The 25 counties where the most prisoners originate are on average $40 \%$ African-American; the 25 counties where most prisoners are incarcerated are on average $35 \%$ African-American. This relationship is detailed in section A. 4 below.

Table 6: Counties with the Highest Incarceration Rates versus Counties with the Highest Prisoner Enumeration Rates

| Origin of Prisoners |  | Usual Residence for Census Enumeration |  |
| :---: | :---: | :---: | :---: |
| County | Incarceration <br> Rate (per 100,000) | County | Enumeration rate (per 100,000) |

## 3. The Concentration of Prisoners Indicates a Shift of Prisoners from Metro to Non-metro Areas of Georgia.

There is a shift of prisoners from metro to non-metro areas in Georgia. Significantly, however, this metro to non-metro transfer does not correspond to a racial shift.

In Georgia, there are 159 counties, of which only 41 are classified as metro by the Census Bureau. The metro counties account for the majority of the state's population (69\%). There is a significant shift of prisoners out of metro counties: while the metro counties incarcerate only $19 \%$ of the state's prisoners, they serve as the point of origin for $62 \%$ of the state's prisoners.

As expected, there is a significant shift of prisoner into non-metro counties: $81 \%$ of prisoners are incarcerated in non-metro counties, but only $38 \%$ originate there.

Finally, the transfer of prisoners from metro to non-metro areas does not correlate to race.
African-Americans comprise, on average, $28 \%$ of a county's population in Georgia. Metro counties have a lower percentage of African-Americans than non-metro counties. The average percentage of African-Americans in metro versus non-metro counties is $23 \%$ and $29 \%$, respectively. See table 7.

Table 7: Characteristics of Metro v. Non-Metro Counties

| Metro $/$ <br> Non-Metro Classification | \# Counties <br> I <br> Population <br> I <br> \% of State <br> Pop. | Average Incarceration Rate | Share of Total Incarcerated Prison Population | Number of Prisoners Incarcerated in the Counties | Share of Total Prisoners from the Counties | Number of Prisoners from the Counties | \% AfricanAmerican |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Metro | $\begin{aligned} & \hline 41 / \\ & 5,605,977 \text { / } \\ & 68.49 \% \\ & \hline \end{aligned}$ | 415 | 18.55\% | 7,307 | 61.77\% | 24,522 | 22.69 ${ }^{\text {c }}$ |
| Non-Metro | $\begin{aligned} & \hline 118 / \\ & 2,580,476 \text { / } \\ & 31.52 \% \\ & \hline \end{aligned}$ | 592 | 81.45\% | 32,074 | 38.23\% | 15,178 | 29.28 ${ }^{\text {c }}$ |

## 4. The Concentration of Prisoners does not Indicate a Movement of Prisoners from the Blackest to Whitest Counties in Georgia.

There appears to be no significant shift of African-American prisoners from black to white areas of the state. The absence of this cross race transfer should not obscure the disproportionate imprisonment generally of African-Americans in Georgia: they constitute $29 \%$ of the population but $60 \%$ of the prisoners.

Several important patterns emerge from analysis of table 8, which aggregates data according to the percentage of African-Americans in a county.

First, while there is a general trend for the average incarceration rate to increase relative to the percentage of African-Americans, the highest incarceration rates are found in counties with one-quarter to one-half African-Americans.

Second, there does not seem to be any significant bias between where prisoners are incarcerated and where they report their home counties. The vast majority of prisoners in the state ( $85 \%$ of the total) are incarcerated in counties with at least one-quarter AfricanAmericans. ${ }^{54}$ In contrast, these same counties are the home counties of $68 \%$ of the prisoners. Thus, counties with a high concentration of African-Americans incarcerate more prisoners than they feed into the system.

Third, the counties with the greatest concentration of whites (ranging from only 0.0 to $12.3 \%$ black) actually experience a net loss. Prisoners reporting these majority-white counties as their home counties are incarcerated in other parts of the state.

Fourth, there is a discernable shift of African-Americans out of one subset of counties. Those counties with an African-American population of 12.0 to $25 \%$ incarcerate significantly less prisoners than they feed into the system. Specifically, these thirty-one counties incarcerate

[^17]only $6 \%$ of Georgia's prisoners, yet they supply $19 \%$ of its prisoners. Overall, however, there appears to be no significant shift of African-American prisoners from black to white areas of the state.

Finally, in spite of the absence of the cross race transfer, there is a general pattern of racial concentration of people within the state. The vast majority of people in northern Georgia are white: nearly every county north of Atlanta has a white population in excess of $77 \%$.

Nevertheless, the majority of prisoners are not incarcerated in these counties.
Table 8: Analysis of Counties Based on Percentage of African-American Residents

|  | 0.0 to 4.9 |

Source: Census Bureau 2000, Georgia: Black or African American persons, percent.

## 5. Georgia Does Not Follow the Pattern Identified in New York.

Georgia does not follow the pattern identified by Wagner in New York of urban to rural shifts correlating to a movement of prisoners from black to white areas of the state. The counties of origin are not the same as the counties of incarceration. There is a shift from metro to nonmetro areas. However, metro areas do not necessarily correlate to black areas nor do non-metro areas necessarily correlate to white areas. Thus, there is no cross race transfer of prisoners from black to white areas of Georgia.

## B. NORTH CAROLINA

In North Carolina, there is no racially significant movement of prisoners away from their county of residence to county of incarceration. In fact, there is most likely not a significant deviation generally between where prisoners are incarcerated and where they resided prior to incarceration. In other words, the same counties originate and incarcerate prisoners. Both the counties of residence and incarceration are dispersed throughout the state. In spite of this lack of concentration, there is still a shift of prisoners from metro to non-metro areas. However, there is no parallel movement of prisoners from heavily African-American to heavily white counties. Thus, North Carolina does not follow the pattern identified by Wagner in New York of urban to rural shifts correlating to a movement of prisoners from black to white areas of the state.

## 1. Black North Carolinians are Disproportionately Imprisoned and Disenfranchised.

In North Carolina, African-Americans are disproportionately imprisoned. According to Census 2000, North Carolina had a population of approximately 8 million people. ${ }^{60}$ Less than a quarter of the population is black, yet nearly two-thirds of its prisoners are black ( $22 \% \mathrm{v} .63 \%$ ).

See table 9.
African-Americans are also disproportionately disenfranchised: ${ }^{61}$ a 2003 study found that $4 \%$ of African Americans are disenfranchised (compared to $1 \%$ of the total voting age residents). ${ }^{62}$

## Table 9: Racial Composition of North Carolina's Population and Prison Population

|  | Population | \% of <br> Population | Prison <br> Population | \% of <br> Prison <br> Population |
| :--- | ---: | ---: | ---: | :--- |
| White | $5,804,656$ | $72.10 \%$ | 10,195 | $32.28 \%$ |
| Black | $1,737,545$ | $21.60 \%$ | 20,034 | $63.44 \%$ |
| Indian | 99,551 | $1.20 \%$ | 572 | $1.81 \%$ |
| Asian | 113,689 | $1.40 \%$ | 68 | $0.22 \%$ |
| Other | 293,872 | $3.65 \%$ | 712 | $2.25 \%$ |

2. Prisoners Originate from the Same Counties that Incarcerate Them. There is no significant transfer of prisoners from their county of residence to incarceration.

In North Carolina, there is not a discernable shift of prisoners away from their county of residence to county of incarceration. Three steps were required in order to examine the absence of a shift: first, the study compares the characteristics of the ten counties that have the highest incarceration rates with the ten counties that have the lowest incarceration rates. See tables 10

[^19]and 11. Second, I examine the twenty counties with the largest prison populations (see table 12) as well as counties with at least ten percent of their enumerated population in prison (see table 5). Finally, rates of incarceration are compared to rates of enumerated prisoners.

## a. Prisoner's Counties of Residence are Dispersed throughout the State.

The incarceration rate indicates the rate at which citizens from a county are sent to prison. The average incarceration rate in North Carolina is 355 per 100,000 people.

Three significant findings are evident from a comparison of tables 10, 11, and 12. First, prisoners in North Carolina originate from counties with heavier concentrations of AfricanAmericans; counties with the highest incarceration rates are $41 \%$ black whereas counties with the lowest incarceration rates are $4 \%$ black. Thus, there is a clear correlation between low incarceration rates and majority white counties.

Second, note that the counties with the highest incarceration rates imprison a proportional number of prisoners. Specifically, the ten counties with the highest incarceration rates serve as the point of origin for $7 \%$ of the state's prison population; they also house $6 \%$ of the state's enumerated prison population.

Third, the greater dispersion of prisoners' county of residence in North Carolina relative to Georgia is evident by comparing tables 10 and 2 , as well as the appendices.

Table 10: Ten Counties with the Highest Incarceration Rates

| County | Incarceration <br> Rate (per <br> $100,000)$ | \% <br> Black |
| :--- | :--- | :--- |

| Beaufort | 44,958 | 271 | 0 | 603 | 29 |
| Lee | 49,040 | 280 | 259 | 571 | 20.5 |
| Anson | 25,275 | 143 | 1127 | 566 | 48.6 |
| Total | 341,968 | 2157 | 1933 |  |  |
| Average |  |  |  |  | 641 |

## b. Prisoners Incarcerated in North Carolina are Not

 Concentrated.Prisoners places of incarceration in North Carolina are not concentrated. The majority of prisoners are not imprisoned in the counties with the highest nor lowest incarceration rates.

Thus, the transfer of prisoners from their county of residence to incarceration is not as pronounced as in Georgia.

There are two effective ways to examine where prisoners are incarcerated and enumerated in North Carolina. The first is by examining the twenty counties with the largest prison population. The second is by calculating the percent of each county population that is in prison.

Method one indicates that counties with large prison populations are not disproportionately white nor black compared to the state generally. See table 13. The state-wide average percentage of African-Americans per county is $28 \%$. The twenty counties with the largest prison population have, on average, a $26 \%$ African-American population.

Table 13: Top Twenty Counties with the Largest Prison Populations

| County | Total <br> Number of <br> Prisoners <br> Incarcerated | Share of <br> State <br> Prisoners <br> Incarcerated | \% <br> Black |
| :--- | ---: | ---: | ---: |
| Wake | 2,611 | $8.67 \%$ | $19.70 \%$ |
| Burke | 1,348 | $4.48 \%$ | $6.70 \%$ |
| Avery | 1,237 | $4.11 \%$ | $3.50 \%$ |
| Anson | 1,127 | $3.74 \%$ | $48.60 \%$ |
| Greene | 1,025 | $3.40 \%$ | $41.20 \%$ |
| Halifax | 1,016 | $3.37 \%$ | $52.60 \%$ |
| Wayne | 972 | $3.23 \%$ | $33.00 \%$ |
| Caswell | 969 | $3.22 \%$ | $36.50 \%$ |
| Rowan | 956 | $3.18 \%$ | $15.80 \%$ |
| Hoke | 916 | $3.04 \%$ | $37.60 \%$ |
| Granville | 883 | $2.93 \%$ | $34.90 \%$ |
| Harnett | 876 | $2.91 \%$ | $22.50 \%$ |
| Pasquotank | 830 | $2.76 \%$ | $40.00 \%$ |
| Robeson | 753 | $2.76 \%$ | $25.10 \%$ |
| Montgomery | 752 | $2.50 \%$ | $21.80 \%$ |
| McDowell | 732 | $2.50 \%$ | $4.20 \%$ |
| Pender | 686 | $2.43 \%$ | $22.60 \%$ |
| Columbus | 643 | $2.28 \%$ | $30.90 \%$ |
| Johnston | 640 | $2.14 \%$ | $15.70 \%$ |
| Stanly | $2.13 \%$ | $11.50 \%$ |  |

Average
26.27\%

Another way to see the lack of concentration of enumerated prisoners is by identifying the counties with a significant percentage of their population in prison. North Carolina does not contain counties with as significant a percentage of their population in prison as Georgia. See table 14. Unlike Georgia, which has nine counties with $10 \%$ or more of their county population in prison, North Carolina only has one small county (Hyde) with $10 \%$ of its population imprisoned. Other counties do, however, incarcerate notable portions of their population: Avery and Greene Counties, for example, incarcerate $7 \%$ and 5\%, respectively. Such counties experience net population gains under the "usual residence" rules. Avery and Greene Counties had a combined net population gain exceeding 2,000 persons. Other counties, however, experience net population losses. Among those counties losing people are Gilford and Mecklenburg Counties, which lost 1,983 and 1,787 persons, respectively.

## Table 14: Percentage of Population Incarcerated in Ten Counties

| County | Census <br> $\mathbf{2 0 0 0}$ <br> Population | County of <br> Incarceration | \% in <br> Prison |
| :--- | ---: | ---: | ---: |
| Hyde | 5,826 | 569 | 10 |
| Avery | 17,167 | 1,237 | 7 |
| Greene | 18,974 | 1,025 | 5 |
| Anson | 25,275 | 1,127 | 4 |
| Caswell | 23,501 | 969 | 4 |
| Pamlico | 12,934 | 496 | 4 |
| Warren | 19,972 | 592 | 3 |
| Montgomery | 26,822 | 753 | 3 |
| Hoke | 33,646 | 916 | 3 |

## c. Where are Prisoners Incarcerated and Enumerated Relative to where they Report their Origin Prior to Incarceration?

The counties with the highest incarceration rates are not necessarily the same counties as have the highest prisoner enumeration rates. Again, incarceration rates reflect the rate at which citizens from a county are sent to prison. Prisoner enumeration rates indicate the rate at which a
county imprisons the population that was enumerated there in Census 2000; in other words, it captures how many citizens per 100,000 persons are incarcerated within that county.

The analysis in table 15 for North Carolina is not as informative as the same comparison for Georgia due to the much greater dispersion of incarcerated prisoners in North Carolina. While there is little overlap between the ten counties with the highest incarceration rates and enumeration rates (only one county-Anson-appears in both tables), this is probably not statistically significant.

The lack of overlap among the highest incarcerating and enumerating counties is due to the arbitrary nature of the comparison. Given the dispersion of prisoners, both in terms of their county of residence and county of incarceration, the comparison of only a small number of counties is misleading. The charts in table 15 only compare $10 \%$ of North Carolina's counties. ${ }^{63}$ Yet, over half of North Carolina's counties incarcerate prisoners. By contrast, less than one-third of Georgia's counties incarcerate prisoners. ${ }^{64}$

These findings suggest that while the counties with the highest incarceration rates may not be the same counties as those with the highest prisoner enumeration rates, the state-wide picture in North Carolina is more complicated than a simple shift to prisoners from high incarcerate rate to high enumeration rate counties.

[^20]Table 15: Counties with the Highest Incarceration Rates versus Counties with the Highest Prisoner Enumeration Rates

| Origin of Prisoners |  | Usual Residence for Prisoner Enumeration |  |
| :--- | :--- | :--- | :--- |
| County Incarceration <br> Rate (per 100,00) <br> Bertie 784 <br> Hertford 712 <br> Madison 662 <br> Lenoir 659 <br> Scotland 625 <br> County Enumeration <br> Rate (per 100,000) <br> Hynce 615 <br> Northampton 611 <br> Beaufort 603 <br> Lee 571 <br> Anson 566 | Avery | 9767 |  |
|  | Greene | 7206 |  |
|  | Anson | 5402 |  |
|  | Caswell | 4459 |  |
|  | Pamlico | 4123 |  |
|  | Warren | 3835 |  |
|  | Montgomery | 2964 |  |
|  | Hoke | 2807 |  |
|  | Pasquotank | 2722 |  |

## 3. There is a Shift of Prisoners from Metro to Non-Metro areas.

Although prisons are located in both metro and non-metro counties, the majority of prisoners are incarcerated in non-metro areas. See table 16. However, metro counties do not correlate to concentrations of African-Americans.

There are 100 counties in North Carolina, of which only 35 are classified as metro by the Census Bureau. The majority of North Carolina's population lives in metro areas (68\%). There is a transfer of prisoners out of metro areas: the majority of North Carolina's prisoners are from metro areas ( $67 \%$ ) whereas only $38 \%$ are incarcerated there. This shift is not as drastic as in Georgia.

As expected, there is a shift of prisoners into non-metro counties. Whereas the majority of prisoners are incarcerated in non-metro counties ( $62 \%$ ) only $33 \%$ originate from here.

Comparing characteristics of metro and non-metro counties leads to two additional findings. First, the incarceration rates of metro and non-metro counties do not vary significantly. Metro counties have an incarceration rate of 359 per 100,000 persons; non-metro counties have
an incarceration rate of 353 per 100,000 persons. Second, the average percent of AfricanAmericans in non-metro areas is actually higher than in metro areas ( $24 \%$ compared to $17 \%$ ). Only one metro county has a population exceeding 50\% African-American (Edgecombe County with $58 \%$ ). Thus, there is no apparent correlation between the most heavily African-American counties, the counties with the highest incarceration rates, and metro areas.

Table 16: Characteristics of Metro v. Non-Metro Counties

| Metro / Non-Metro Classification | \# Counties <br> I <br> Population <br> I <br> \% of State <br> Pop. | Average Incarceration Rate | Share of <br> Total <br> Incarcerated <br> Prison <br> Population | Number of Prisoners Incarcerated in the Counties | Share of <br> Total Prisoners from the Counties | Number of Prisoners from the Counties | \% AfricanAmerican |

4. There is No Shift of Prisoners from Black to White Areas of the State.

There appears to be no significant shift of African-American prisoners from black to white areas of the state. Nor is there more generally a movement of prisoners from their county of residence to incarceration. The absence of this cross race transfer should not obscure the disproportionate imprisonment generally of blacks in North Carolina: they constitute $22 \%$ of the population but $63 \%$ of the prisoners.

Several important patterns emerge from analysis of table 17, which aggregates data according to the percentage of African-Americans in a county.

First, the higher the concentration of African-Americans, the higher the average incarceration rate; in contrast, the higher the concentration of whites, the lower the average incarceration rate.

Second, the majority of North Carolina's prison population is incarcerated in counties with a significant African-American presence. The state-wide average percentage of AfricanAmericans per county is $28 \%$. Approximately $50 \%$ of prisoners are incarcerated in counties with at least one-quarter of its population comprised of African-Americans.

Third, there is likely not a significant deviation between where prisoners are incarcerated and where they resided prior to incarceration. The counties with the largest white populations do incarcerate slightly more prisoners than originate from them. However, the counties with the heaviest concentrations of African-Americans also incarcerate more prisoners than originate from them. Moreover, the heavily black counties gain nearly two times more prisoners than the whitest counties. Specifically, the difference between county of residence and incarceration for the blackest counties is $5 \%$, while the difference for the whitest counties is only $3 \%$. See table 17.

In addition, among the remaining counties (classified as neither the blackest nor whitest), half exhibit a near parity between county of residence and incarceration. Specifically, thirty-five counties with an African-American population ranging from 5.0 to $12.3 \%$ have nearly equal rates of incarceration and enumeration.

In contrast, the final aggregated category of counties (classified as neither the blackest nor whitest) do experience a net loss of population. Specifically, $7 \%$ more prisoners originate than are incarcerated in the remaining thirty-six counties. See table 17, row 2. These thirty-six counties have one-quarter to one-half African American population. ${ }^{65}$

[^21]Overall, however, in North Carolina there does not appear to be a movement of prisoners from their county of residence to incarceration. In other words, the same counties which serve as the point of origin for prisoners also incarcerate significant portions of the state's prisoners.

Finally, in spite of the absence of the cross race transfer, there is a general pattern of racial concentration of people within the state. The vast majority of people in western North Carolina are white while the counties in the east are majority black. Nearly every county in the western tip of the state has a white population in excess of $87 \%$. Nevertheless, the majority of prisoners are not incarcerated in these counties.

Table 17: Analysis of Counties Based on Percentage of African-American Residents

| \% of Black Residents in County | \# Counties ${ }^{66}$ / <br> Population/ <br> \% of State <br> Pop. | Average Incarceration Rate | Share of Total Incarcerated Prison Population | Number of Prisoners Incarcerated in the Counties | Share of Total Prisoners from the Counties | Number of Prisoners from the Counties |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 50 to 86.7 | $\begin{aligned} & 6 \text { counties }^{6 / /} \\ & 197,408 / \\ & 2.48 \% \end{aligned}$ | 576 | 8.19\% | 2,466 | 3.66\% | 1,098 |
| 25 to 49.9 | 36 counties $^{\text {68/ }}$ $3,362,111 /$ $41.77 \%$ | 441 | 42\% | 12,665 | 49.17\% | 14,748 |
| 12.4 to 24.9 | $\begin{aligned} & 2^{21} \text { counties }^{69 /} \\ & 2,489,786 / \\ & 30.93 \% \end{aligned}$ | 346 | 27.08\% | 8,152 | 28.43\% | 8,529 |

| 0.0 to 4.9 | $\begin{aligned} & 23 \text { counties }^{71} / \\ & 761,156 / \\ & 9.46 \% \end{aligned}$ | 212 | 8.22\% | 2,476 | 5.68\% | 1,705 |

[^22]
## 5. North Carolina does Not Follow the Pattern Identified in New York.

In North Carolina, there is no racially significant movement of prisoners away from their county of residence to county of incarceration. In fact, there is most likely not a significant deviation generally between where prisoners are incarcerated and where they resided prior to incarceration. In other words, the same counties originate and incarcerate prisoners. Both the counties of residence and incarceration are dispersed throughout the state. In spite of this lack of concentration, there is still a shift of prisoners from metro to non-metro areas. However, there is no parallel movement of prisoners from heavily African-American to heavily white counties. Thus, North Carolina does not follow the pattern identified by Wagner in New York of urban to rural shifts correlating to a movement of prisoners from black to white areas of the state.

> 0.0 to 4.9

## VI. RECOMMENDATION

To ensure accuracy and fairness in Census 2010, the Census Bureau must adopt standards for prisoner enumeration that account for the South. Failure to do so is especially troubling in light of the fact that the South now has higher incarceration rates than any other region in the United States.

Georgia and North Carolina deviate from the assumption that the "usual residence" rule as applied to prisoner enumeration results in movement of prisoners from minority, urban areas to white, rural ones. The lack of a cross race transfer in the South has implications for Census 2010.

The recommended method for counting prisoners is to compile two independent data sets: one indicating the incarceration address and another compiling the home county prior to incarceration. ${ }^{72}$ Such a standard introduces additional practical difficulties by: (a) increasing the complexity of data collection; ${ }^{73}$ and (b) leaving unresolved which data set federal funding decisions should be based upon. In spite of these flaws, the bifurcation of the data into two statistical sets will provide increased accuracy and flexibility in state-based decisions, chief among them redistricting (which is, after all, the primary purpose of compiling Census data). Each state can then allocate prisoners based on its own disparities-of the lack thereof-in racial and geographic distributions.

[^24]

## Appendix 3: Alabama

## A. Findings

## 1. General Demographics

Alabama has the fifth highest incarceration in the country (612 per 100,000 inmates as of June 30, 2003). ${ }^{74}$ The incarceration rate in Alabama grew by $292 \%$ between 1980 and 2001. ${ }^{75}$ While $26 \%$ of Alabama's population is African-American, $65 \%$ of its prison population is African-American. 14\% of African Americans are disenfranchised (compared with $6 \%$ of the total voting age residents). ${ }^{76}$ Alabama has sixty-seven counties.

Table 1: Racial Composition of Alabama's Population and Prison Population

|  | Population | \% of <br> Population | Prison <br> Population | \% of <br> Prison <br> Population |
| :--- | ---: | ---: | ---: | ---: |
| White | $3,162,808$ | $71.10 \%$ | 8,999 | $34.78 \%$ |
| Black | $1,155,930$ | $26.00 \%$ | 16,785 | $64.88 \%$ |

## 2. County of Conviction: Where are Alabama's Prisoners From?

The following discussion is based upon incarceration rates derived from figures compiled by the Alabama Department of Corrections. The top eleven counties with the highest incarceration rates account for 6,708 , or $26 \%$ of total state convictions; however, according to the Census Bureau these counties incarcerate only 3,966 , or $24 \%$ of the state's prisoners.

Table 2: Eleven Counties with Highest Incarceration Rates

| County | Incarceration <br> Rate | \% Black | Metro? | Prison? |
| :--- | ---: | :--- | :--- | :--- |
| Russell | 1200 | $40.8 \%$ | Y | N |
| Houston | 992 | $24.6 \%$ | Y | Y |
| Montgomery | 874 | $48.6 \%$ | Y | Y |
| Coosa | 852 | $34.2 \%$ | N | N |
| Chambers | 842 | $38.1 \%$ | N | N |

[^25]| Dallas | 813 | $63.3 \%$ | N | Y |
| :--- | ---: | ---: | ---: | ---: |
| Bullock | 785 | $73.1 \%$ | N | N |
| Talladega | 782 | $31.5 \%$ | N | N |
| Etowah | 771 | $14.7 \%$ | Y | Y |
| Pike | 770 | $36.6 \%$ | N | N |
| Morgan | 757 | $11.2 \%$ | Y | N |

The eleven counties with the lowest incarceration rates according to the Alabama Department of Corrections, accounted for 1,196 of convictions, or 5\% of the state's total convictions; however, according to the Census Bureau, these eleven counties incarcerated 4,466 prisoners, or $27 \%$ of the state's total prison population.

Table 3: Eleven Counties with Lowest Incarceration Rates

| County | Incarceration <br> Rate | \% Black | Metro? | Prison? |
| :--- | ---: | ---: | :--- | :--- |
| Bibb | 240 | $22.2 \%$ | N | N |
| Hale | 250 | $59.0 \%$ | N | N |
| Shelby | 252 | $7.4 \%$ | Y | Y |
| Lawrence | 270 | $13.4 \%$ | Y | Y |
| Limestone | 282 | $13.3 \%$ | Y | N |
| Lamar | 283 | $12.0 \%$ | N | N |
| Wilcox | 288 | $71.9 \%$ | N | N |
| Jackson | 299 | $3.7 \%$ | N | Y |
| Cherokee | 300 | $5.5 \%$ | N | Y |
| Blount | 304 | $1.2 \%$ | Y | N |
| Cleburne | 304 | $3.7 \%$ | N | N |

## 3. Where are Prisoners Incarcerated?

According to the Census Bureau, only nineteen of the Alabama's sixty-seven counties incarcerate state prisoners. The ten counties with the largest prison population account for 14,095 , or $85 \%$ of the state total. Five of these ten counties are metro; the average percentage of African-Americans across the ten counties is $33 \%$. Thus, according to the Census Bureau, in Alabama, incarcerated prisoners are concentrated in ten counties. Three of these counties are clustered around Birmingham, Alabama; others are scattered throughout the state (although tend to be located in the southern portion).

Table 4: Ten Counties with the Largest Prison Population

| County | County of <br> Incarceration |  |  |
| :--- | ---: | :--- | :--- |
| Barbour | 2,248 | $46.3 \%$ | N |
| Limestone | 2,001 | $13.3 \%$ | Y |
| Elmore | 1,489 | $20.6 \%$ | Y |
| Jefferson | 1,484 | $39.4 \%$ | Y |
| Escambia | 1,434 | $30.8 \%$ | N |
| Bullock | 1,376 | $73.1 \%$ | N |
| St. Clair | 1,287 | $8.1 \%$ | Y |
| Montgomery | 1,133 | $48.6 \%$ | Y |
| Bibb | 900 | $22.2 \%$ | N |
| Talladega | 743 | $31.5 \%$ | N |

## 4. Do the Prisoners Move from Predominantly Black Areas to Predominately White Areas of the State?

| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## 5. Conclusion

Given the errors in data and the incompatibility between the Census Bureau figures and the Alabama Department of Corrections data, it is impossible to draw any reasonably reliable conclusions at this time.

One major cause of data flaws is the incompatibility of the Census statistics and Alabama's Department of Corrections figures. Compare the Census figures for the county of incarceration with the Alabama Department of Corrections figures for county of conviction: the overall totals for prisoners in the state are inconsistent by nearly 10,000 prisoners. ${ }^{83}$ The 10,000 prisoner difference between how many prisoners Alabama says it has convicted and the Census Bureau says are incarcerated is due to the inconsistent practice between Alabama and the Census Bureau regarding which types of institutions (state prisons, county jails with state prisoners, etc.) each includes in their figures.

In addition, there is no feasible way to identify which institutions the Census Bureau was actually counting and where (in which county) they were actually counting them. For example, Census Bureau statistics indicate that Elmore County holds 2,564 inmates in its local jails; however, a sheriff in Elmore County informed the author that there were only about 240 state prisoners there. Yet, Brian Corbett, Public Information Office at the Alabama Department of Corrections, asserts that the state does not lease space from localities to incarcerate state prisoners. Peter Wagner indicates that in order to adjust the data a much more in-depth analysis

[^27]of each institution (using geo-mapping software as well as individual calls to each
institution-state, federal and local) is necessary. However, it was not feasible to accomplish such research within the scope of this study.

C-14, available at http://www.census.gov/prod/cen2000/doc/sf1.pdf (last visited Nov. 22, 2004) [hereinafter "Census Technical Documentation"].
    ${ }^{2}$ The south as a region has the highest incarceration rates in the United States ( $12 \%$ higher than the country as a whole in 2001); in addition, the prison and jail populations in the South account for four out of ten incarcerated people in the U.S. See Jason Ziedenberg, Deep Impact: Quantifying the Effect of Prison Expansion in the South, p. 4 available at http://www.justicepolicy.org/article.php?id=124 (April 4, 2003) [hereinafter "Deep Impact"]. In addition, the exponential growth of the prison population in the United States makes the question of prisoner enumeration increasingly important. In 2000, over 1.3 million people were imprisoned in state or federal prisons, up from 218,000 in 1974. See U.S. Department of Justice, Bureau of Justice Statistics, Sourcebook of Criminal Justice Statistics 2000, table 6.27, available at http://www.albany.edu/sourcebook (last visited Nov. 22, 2004). Further, in 2003, the total prison population grew by 40,983, the largest increase in four years. See U.S. Department of Justice, Bureau of Statistics Bulletin: Prison and Jail Inmates at Midyear 2003, p. 1, available at
    http://www.ojp.usdoj.gov/bjs/pub/pdf/pjim03.pdf (May 2004). Finally, accompanying this expansion of prisoners is

    ${ }^{31}$ In addition to Wagner's research, another commentator examined prisoner enumeration in Chicago, Illinois. He found that it comports with the pattern identified by Wagner in New York. The Chicago area accounts for $83 \%$ of the state's African-American population and is the point of origin for $70 \%$ of the state's prisoners; Chicago's Cook County alone provides $44 \%$ of the state prison population. Yet, the prison facilities constructed in the last two decades are located in areas of the state that are overwhelmingly white.     ${ }^{40}$ Georgia Department of Corrections data is based upon a sample that includes "active prisoners excluding jail." According to Ron Henry, a statistician at the Georgia Department of Corrections, this includes any institution in the state housing state prisoners including state prisons, county jails (but only those after conviction waiting to be admitted to a state-run institution), and county correctional facilities (not the total population, but only those

[^11]:    classified as state inmates). The state of Georgia "leases" space from localities (payment is a per diem for each prisoner).

    ${ }^{47}$ Ryan S. King and Martin Mauer, The Vanishing Black Electorate: Felony Disenfranchisement in Atlanta, Georgia, available at http://www.righttovote.org/upload/formedia/462_UFile.pdf (last visited Dec. 11, 2004). "The state of Georgia lies in the mid-range of states nationally in terms of the restrictiveness of its disenfranchisement policy. Persons serving a felony sentence in prison or on probation or parole are prohibited from voting, but these rights are restored after the completion of one's sentence." See GA. Const., Art. II, § 1 ("No person who has been convicted of a felony involving moral turpitude may register, remain registered, or vote except upon completion of the sentence); see also GA. CODE ANN. § 21-2-216(b) (2004); GA. CODE ANN. § 21-2-231 (2004) (providing the procedure for removal of prisoners from voter rolls).
    ${ }^{48}$ U.S. Department of Justice, Bureau of Statistics Bulletin: Prison and Jail Inmates at Midyear 2000, p. 5 (March 2001) [hereinafter "DOJ: Statistics 2000"].

[^14]:    ${ }^{49}$ Id. at 8 . The three large local jail populations are located in: Fulton County ( 2,869 prisoners); DeKalb County (3,070 prisoners) and Cobb County (2,074 prisoners).
    ${ }^{50}$ Deep Impact, supra note 2 , at 7 .

[^15]:    ${ }^{51}$ DOJ: Statistics 2000, supra note 48 , at 3.
    ${ }^{52}$ Although Fulton County does not have the highest incarceration rate, it may be the county of origin for the greatest number of prisoners; Fulton County suffers a population net loss of 5,043 persons under the "usual residence" rule.

[^16]:    ${ }^{53}$ The six overlapping counties are Dodge, Dooly, Mitchell, Taylor, Telfair, and Ware.

[^17]:    ${ }^{54}$ A reminder to once again remain cognizant of the fact that the calculation of the percentage of African-Americans in any given district includes those African-Americans who are in prison; this causes some skewing of the data.

[^18]:    ${ }^{55}$ Census 2000, Quick Facts, Georgia Map: Black or African American Alone, percent, 2000, available at http://quickfacts.census.gov/qfd/maps/thematic/PL1210013.html (last visited Nov. 22, 2004).
    ${ }^{56}$ The seventeen counties in Georgia with a 50 to 86.7 percent African American population include: Baker, Burke, Calhoun, Clay, Clayton, DeKalb, Dougherty, Hancock, Jefferson, Macon, Randolph, Stewart, Talbot, Taliaferro, Terrell, Warren, and Washington.
    ${ }^{57}$ The seventy-three counties with a 25.0 to $49.9 \%$ African-American population include: Baldwin, Ben Hill, Bibb, Brooks, Bulloch, Butts, Candler, Charlton, Chatham, Chattahoocee, Clarke, Clinch, Coffee, Cook, Crisp, Decatur, Dodge, Dooly, Early, Elbert, Emanuel, Evans, Fulton, Glynn, Grady, Greene, Irwin, Jasper, Jenkins, Johnson, Lamar, Lanier, Laurens, Liberty, Lincoln, Lowdnes, Marion, McDuffie, McIntosh, Meriwether, Miller, Mitchell, Monroe, Montgomery, Morgan, Muscogee, Peach, Pulaski, Putnam, Quitman, Richmond, Schley, Screven, Seminole, Spalding, Sumter, Tattnall, Taylor, Telfair, Thomas, Tift, Truetlen, Troup, Turner, Twiggs, Upson, Ware, Webster, Wheeler, Wilcox, Wilkes, Wilkinson, and Worth.
    ${ }^{58}$ The thirty-one counties with a 12.0 to $24.9 \%$ African-American population include: Appling, Atkinson, Bacon, Bleckley, Bryan, Camden, Carroll, Cobb, Colquitt, Coweta, Crawford, Douglas, Effingham, Floyd, Gwinnett, Harris, Hart, Henry, Houston, Jeff-Davis, Jones, Lee, Long, Newton, Oglethorpe, Pike, Polk, Rockdale, Toombs, Walton, and Wayne.
    ${ }^{59}$ The eighteen counties with a 5.0 to $12.3 \%$ African-American population include: Barrow, Bartow, Berrien, Chattooga, Columbia, Echols, Fayette, Franklin, Glascock, Hall, Haralson, Heard, Jackson, Madison, Oconee,

[^19]:    ${ }^{60}$ The Census 2000 enumeration for the state was $8,049,313$ persons.
    ${ }^{61}$ In North Carolina, voting is restored after release from incarceration and completion of parole (probationers may vote). N.C. Const., Art. VI, § 2.3 ("Disqualification of felon. No person adjudged guilty of a felony against this State or the United States, or adjudged guilty of a felony in another state that also would be a felony if it had been committed in this State, shall be permitted to vote unless that person shall be first restored to the rights of citizenship in the manner prescribed by law"). See also N.C. GEn. Stat. § 163-55, § 13-1 (restoration of citizenship), § 13-2 (issuance and filing of certificate or order of restoration).
    ${ }^{62}$ Deep Impact, supra note 2, at 14.

[^20]:    ${ }^{63}$ In comparison, table 6 , infra at 23 , provides a comparison of 25 of the 46 counties in Georgia that incarcerate people.
    ${ }^{64}$ Specifically, 57 of North Carolina's 100 counties house prisoners; only 46 of Georgia's 159 counties do so.

[^21]:    ${ }^{65}$ Additional anecdotal evidence may suggest that there is not a racial disparity between where prisons are located and where prisoners originate. The report 32 Years Since Attica identified a general pattern of racial disparity between (black) prisoners and (white) staff; however, North Carolina diverged from this pattern and exhibited a parity between (black) prisoners and (black) guards. Peter Wagner, 32 Years Since Attica, available at http://prisonpolicy.org/articles/alternet102503.shtml (last visited Nov. 22, 2004).

[^22]:    ${ }^{66}$ Census 2000, Quick Facts, North Carolina Map: Black or African American Alone, percent, 2000, available at http://quickfacts.census.gov/qfd/maps/thematic/PL1210037.html (last visited Nov. 22, 2004).
    ${ }^{67}$ The six counties with a 50 to $86.7 \%$ African American population are: Bertie, Edgecombe, Halifax, Hertford, Northampton, and Warren.
    ${ }^{68}$ The thirty-six counties with a 25 to $49.9 \%$ African American population are: Anson, Beaufort, Bladen, Caswell, Chowan, Columbus, Craven, Cumberland, Duplin, Durham, Forsyth, Franklin, Gates, Granville, Greene, Guilford, Hoke, Hyde, Jones, Lenoir, Martin, Mecklenburg, Nash, Pasquotank, Perquimans, Person, Pitt, Richmond, Robeson, Sampson, Scotland, Tyrell, Washington, Wayne, Wilson, and Vance.
    ${ }^{69}$ The twenty-one counties with a 12.4 to $24.9 \%$ African American population are: Alamance, Brunswick, Camden, Chatham, Cleveland, Gaston, Harnett, Iredell, Johnson, Lee, Montgomery, Moore, New Hanover, Onslow, Orange, Pender, Rockingham, Rowan, Union, and Wake.
    ${ }^{70}$ The fourteen counties with a 5.0 to 12.3 African American population are: Buncombe, Burke, Cabarrus, Caldwell, Carteret, Catawba, Currituck, Davidson, Davie, Lincoln, Polk, Randolph, Rutherford, and Stanley.

[^23]:    ${ }^{71}$ The twenty-three counties with a 0.0 to $4.9 \%$ African American population are: Alexander, Alleghany, Ashe, Avery, Cherokee, Clay, Dare, Graham, Haywood, Henderson, Jackson, Macon, Madison, McDowell, Mitchell, Stokes, Surrey, Swain, Transylvania, Watauga, Wilkes, Yadkin, and Yancey.

[^24]:    ${ }^{72}$ Persily, supra note 3.
    ${ }^{73}$ This is not a small concern. The Census data, as illustrated by Appendix 3 detailing Alabama statistics, is already deeply flawed in some states. This is due to improperly allocating prisoners to counties as well as improperly including or excluding local inmates or federal prisoners in state prison facility totals. By bifurcating the data sets, inaccuracies in prisoner enumeration may increase.

[^25]:    ${ }^{74}$ U.S. Department of Justice, Bureau of Statistics Bulletin: Prison and Jail Inmates at Midyear 2003, p. 1 (May 2004).
    ${ }^{75}$ Deep Impact, supra note 2 , at 8.
    ${ }^{76} I d$. at 14 .

[^26]:    ${ }^{77}$ Census 2000, Quick Facts, Alabama Map: Black or African American Alone, percent, 2000, available at http://quickfacts.census.gov/qfd/maps/thematic/PL1210001.html (last visited Nov. 22, 2004).
    ${ }^{78}$ The ten counties with a 50.0 to $86.7 \%$ African-American population in Alabama include: Bulloch, Dallas, Greene, Hale, Lowndes, Macon, Marengo, Perry, Sumter, and Wilcox.
    ${ }^{79}$ The twenty counties with a 25 to $49.9 \%$ African-American population in Alabama include: Barbour, Butler, Chambers, Choctaw, Clarke, Conecuh, Coosa, Escambia, Henry, Jefferson, Mobile, Monroe, Montgomery, Pickens, Pike, Russell, Talladega, Tallapoosa, Tuscaloosa, and Washington.
    ${ }^{80}$ The seventeen counties with a 12.4 to $24.9 \%$ African-American population in Alabama include: Autauga, Bibb, Calhoun, Clay, Coffee, Colbert, Covington, Crenshaw, Dale, Elmore, Etowah, Houston, Lawrence, Lee, Limestone, Madison, and Randolph.
    ${ }^{81}$ The eleven counties with a 5.0 to $12.3 \%$ African-American population in Alabama include: Baldwin, Cherokee, Chilton, Fayette, Geneva, Lamar, Lauderdale, Morgan, Shelby, St. Clair, and Walker.

[^27]:    ${ }^{82}$ The nine counties with a 0.0 to $4.9 \%$ African-American population in Alabama include: Blout, Cleburne, Cullman, DeKalb, Franklin, Jackson, Marion, Marshall, and Winston.
    ${ }^{83}$ In Alabama, the total number of prisoners purportedly convicted in Alabama totals 25,864 people (according to the Department of Corrections); yet the Census Bureau reports county of incarceration figures for only 16,584 prisoners.
