The Supreme Court requires local governments to update their legislative districts once per decade so that each district contains the same population, giving each resident equal representation. For most local governments this redistricting process relies on U.S. Census data and is straightforward. For communities that host large prisons, however, the process can be more complex because the U.S. Census Bureau counts incarcerated people where they are confined, even though the Minnesota Constitution declares that a prison is not a residence.

**Problem**

The Census Bureau counts people incarcerated in a correctional facility as residents of the prison, so when Pine County uses Census data to draw its legislative districts, the Board of Commissioners district with the prison in it will have fewer actual Pine County residents than the other districts. This means that the county is — albeit unintentionally — giving people who live near the prison more representation on the Pine County Board of Commissioners. This violates principles of equal representation.

- Pine County last redistricted after the 2000 Census, when it drew districts where about 15% of District 5 was incarcerated. Padding the population of District 5 with non-resident incarcerated people gives every group of 85 people in District 5 the same political power as 100 people in other districts. (The County did not redistrict after the 2010 Census because it concluded that, according to Census data, the district populations had not changed enough.) The problem of prison gerrymandering will be much larger for Pine County after this Census because the number of people incarcerated at FCI Sandstone has increased to over 1,300, which would make it more than 22% of a district.

**Solutions**

In most states, the solution would be simple: use redistricting data that complies with the state’s definition of residence. In our research, we’ve discovered more than 200 county and municipal governments that removed the prison population prior to redistricting. Most of these local governments do so by choice, and a few states even require or encourage this outcome.

Unfortunately, unlike most states, Minnesota statute defines population in a way that has led some to conclude that the Census Bureau’s unadjusted prison counts must be used for redistricting — without
any regard to the inequality that flows from counting incarcerated people in the wrong place. (Minnesota Statute § 645.44(8) says that “unless otherwise expressly provided” “[w]hen used in reference to population, ‘population’ and ‘inhabitants’ mean that shown by the last preceding federal decennial census.”) There are at least three possible solutions to this problem:

1. Pine County can take note of the fact that the Census Bureau will be, for the first time, publishing counts of incarcerated people in a special table in the PL94-171 redistricting data file. The Census is making this change specifically to help, in its own words, “those in the redistricting community who must consider whether to include or exclude certain populations when redrawing boundaries.” Your county could conclude that using the Census data in this way is entirely consistent with the statutory requirement to use data “shown by the last preceding federal decennial census.”

2. Pine County can conclude that the federal constitutional requirement of equal representation, and Minnesota’s constitutional definition of residence, are more important than a simple statutory definition.

3. Pine County should ask the Minnesota state legislature to amend the statutes that control county redistricting (§ 375.025) and municipal redistricting (§ 205.84), such that they explicitly define the population to be used for redistricting to not include people in a location solely for the purpose of incarceration as required by Article VII, § 2 of the State Constitution.
