The Supreme Court requires local governments to update their legislative districts once per decade so that each district contains the same population, giving each resident equal representation. For most local governments this redistricting process relies on U.S. Census data and is straightforward. For communities that host large prisons, however, the process can be more complex because the U.S. Census Bureau counts incarcerated people where they are confined, even though a prison is not a residence under Wisconsin residence law.

**Problem**

The Census Bureau counts people incarcerated at a correctional facility as residents of the prison, so when Racine uses Census data to draw its legislative districts, the Common Council district with the prison in it will have fewer actual Racine residents than the other districts. This means that the county is — albeit unintentionally — giving people who live near the prison more representation on the Racine Common Council, in violation of the constitutional principle of equal representation.

- After the 2010 Census, the Racine City Common Council counted 666 people incarcerated at the Racine County Jail as if they were residents of District 1, and 450 people incarcerated at the Racine Youthful Offender Correctional Facility as if they were residents of District 8.

- People incarcerated at the Racine County Jail account for about 13% of the population of District 1. That effectively gives each group of 87 actual residents in District 1 as much political clout as 100 people in the other districts.

- People incarcerated at the Racine Youthful Offender Correctional Facility account for about 9% of the population of District 8. That effectively gives each group of 91 actual residents in District 8 as much political clout as 100 people in the other districts.

**Solutions**

In most states, the solution would be simple: use redistricting data that complies with the state’s definition of residence. In our research, we’ve discovered more than 200 county and municipal governments that removed the prison population prior to redistricting. Most of these local governments do so by choice, and a few states even require or encourage this outcome.
In 1981, however, Wisconsin’s Attorney General recommended that local governments take the Census’ data at face value and not make any adjustments to account for the prison miscount (70 Wis. Op. Atty. Gen. 80 (1981)). Nevertheless, after the 2010 Census, six Wisconsin cities and counties — Crawford County and the cities of New Lisbon, Portage, Prairie du Chien, and Stanley — avoided prison gerrymandering.

For 2020, these local efforts will be easier than ever before because the Census Bureau is including additional detail within its redistricting data. The Census Bureau will be, for the first time, publishing counts of incarcerated people in a special table in the PL94-171 redistricting data file — specifically to help, in the Census Bureau’s words, “those in the redistricting community who must consider whether to include or exclude certain populations when redrawing boundaries.”
